-Please select from the following additional quoting options-

- Factory representative provided on site for technical support and installation instruction (first day only & must be scheduled 1 week in advance).
- Factory installation for screening project (must be scheduled 2 weeks in advance).

Comments/Notes/Special Instructions:

SkyLine™ cosmetic screens are manufactured from 100% steel components. Cosmetic Screening is becoming a jurisdictional requirement in many locations throughout the U.S. and Canada. Our screens are available in 21 colors to match most building color schemes. The cosmetic screen effectively hides the rooftop HVAC unit by a surrounding the unit with an 8 sided external structure that is color matched to the customers request. Our screens have been rated to withstand a direct wind force of 160 MPH. The SkyLine™ cosmetic screens also utilize access doors on 4 sides for convenient access to the unit for service and coil cleaning.

SkyLine™ cosmetic screens are very easily installed unlike our competitors in which complete fabrication is required from a box of materials and instructions. SkyLine™ screens are pre-fabricated for the designated unit, crated and shipped. There is no fabrication required, just uncrate, install four corner brackets, attach the panels, attach the trim and it is complete (all hardware is included and we commission an onsite rep during installation). SkyLine™ Rooftop Equipment Screening is the industry leader. Our product dramatically reduces your labor costs and is superior in design, aesthetics and functionality.
